Banking & ATM Security Systems

We and our international partners are having a long relationship with banking sector within Saudi Arabia and world wide. For branches, ATM & POS Terminals, we enhance the safety of customers and employees and saves operation cost.

Solutions provided by us, can transmit the video from local branches and ATMs to the monitoring centers via LAN and leased TCP/IP line. Security staff can view the live video on Multi Site Monitoring Software, which is convenient for any organization with geographically dispersed local branches. We also provide sophisticated event management such that the security staff will be alerted with dial back when there are events like external Alarm, video loss, system temper and system failure.

The systems provided are being tested for reliability, and are the versatile video recording servers. Which have the built in web server. All the bank need is its personal leased line. The video is recorded on site for 6 months to 1 year, according to the need of the customer.

The CCTV system is being integrated with burglar system in such a way that whenever a alarm is triggered, you can view the specific time video along with alarm. The alarms are also being received with the security staff.

SALRCO also provide state of the art Control & Monitoring stations, For more information on our Monitoring Center contact us. Monitoring is available for just about any type of equipment. We can provide customized responses according to your requirements.

Point of Sales Logistic Management

Your Reliable
Security
Partner

Point of Sales Solution

We are introducing one of the most latest and safe point of sale solution. Even this is a retail store or a huge one roof shopping center. Now its possible to track your sale with live video and also in the recording.

With every sale, invoice is printed on to the video. Now you can view all the items sold along with whom sold. Any query regarding sales can be catered within no time.

The SitePOS is a special firmware for use with video recording systems. The Point of Sale (POS) printer has to be a serial printer which has a COM port for connection to our video recording system. The POS printer sends the transaction data through the COM port to our system. The SitePOS firmware in our system will then overlay the transaction data (basically the text on the invoice/sales memo) onto the video. Both the text and the video will be recorded in the video server.

Logistic Management

Remote CCTV monitoring can assist logistics companies in providing a real vision on logistical process and increasing delivery efficiency. When cargoes arrive at the 24-hour operating cargo center, supervisors in control room will get information of transportation process, cargo-discharging status, worker's safety and working conditions, etc. from their computer. Acting as a centralized monitoring station, our remote CCTV system can benefit the logistics companies by providing high efficiency and low-cost logistics management.

Mobile & PC Monitoring

Mobile Video Monitoring

Mobile Monitoring Solution helps you to quickly and easily access live video of business with a mobile phone while you are

Key Features

- Video transmission: HSDPA, 3G, EDGE, GPRS
- Can view live video with date, time and name.
- Alarm Information
- Digital pan and zoom
- Support advanced security mode & PTZ Cameras
- Support almost all the mobile phones
- One touch site connect
- View Event Logs
- Camera preset calling
- Providing up to 30 different locations in address book for your sites you care about

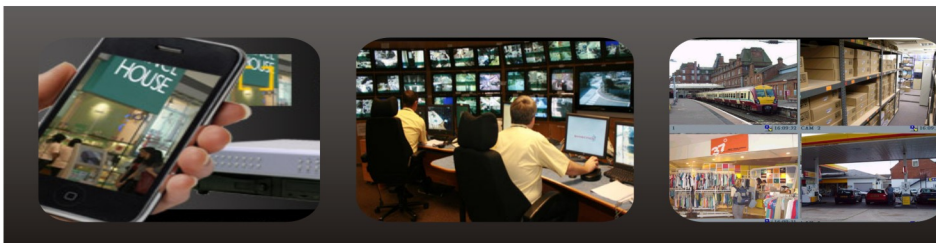

Single and Multiple Site Monitoring Solution

With a wide range of software available with us, connection is possible to single site and multiple site monitoring. Even you can install network cameras through TCP/IP and PSTN

Key Features

- Digital video recording and comprehensive playback search.
- Electronic patrol
- Comprehensive event log
- Manage single or multiple sites simultaneously
- Modular design & highly scalable
- Operator account system
- Access control & intrusion system integrity

This technology is being offered to provide you with a complete security solution. Integrity of technology is our business and providing you with state of art solution is our primary aim. From CCTV control rooms to small business monitoring, production line to warehouses, unmanned industry to labor monitoring and from your inside house to the boundary wall. We provide you a complete solution according to your need. Our technical consultants provide you with the reliable efficient, and cost effective solution within your range.

Home Security Systems

Your Reliable Security Partner

Home Intrusion & CCTV Security System

The peace of mind that a secure home offers is invaluable. And statistics have proven what you already know by common sense: a complete home alarm system is an excellent deterrent to intrusion.

Finding the right home security system for your needs is important to you. And helping you get the right system at the right price is important to us. Whether it's a simple home burglar alarm kit, or a customized surveillance system with CCTV security cameras, we can help. Whatever is your requirement, SALRCO offers all the high-level security with professionally installed systems without the high-level prices.

Whether you are at home or away, we provide you the peace of mind to enjoy the confidence that your home, and loved ones are protected and secure. We offer you with complete home security sensors to overcome any type of mishap in advance.

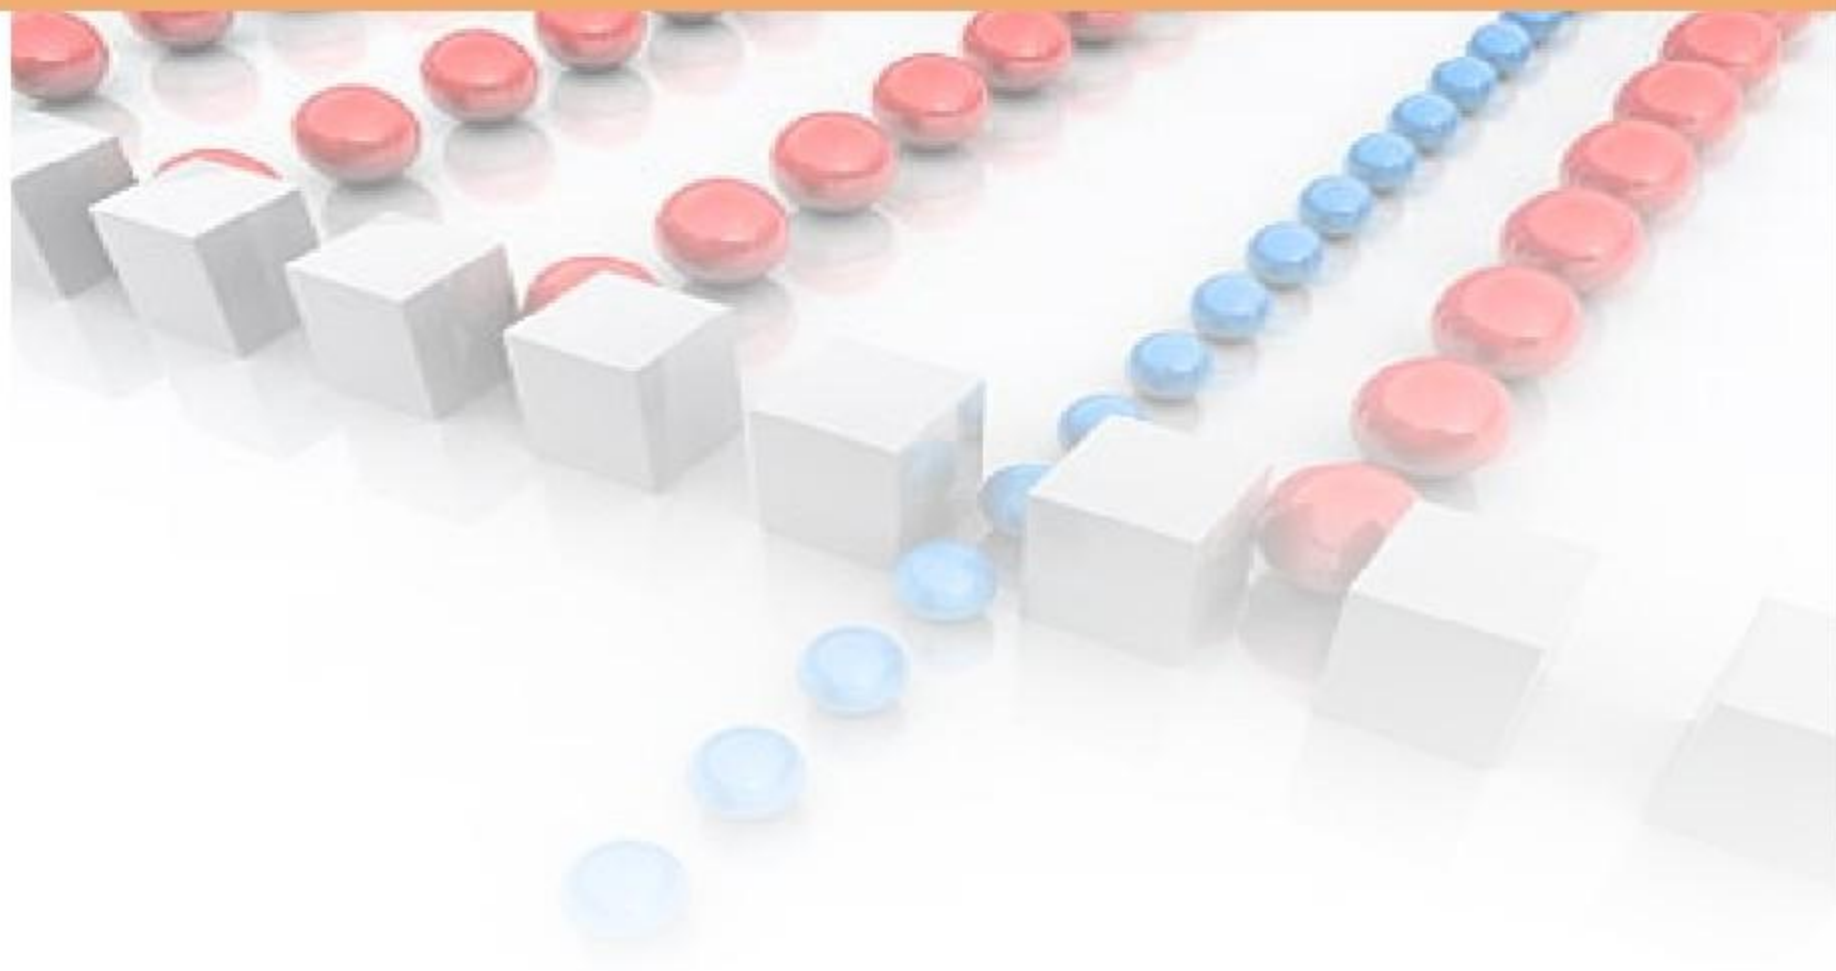

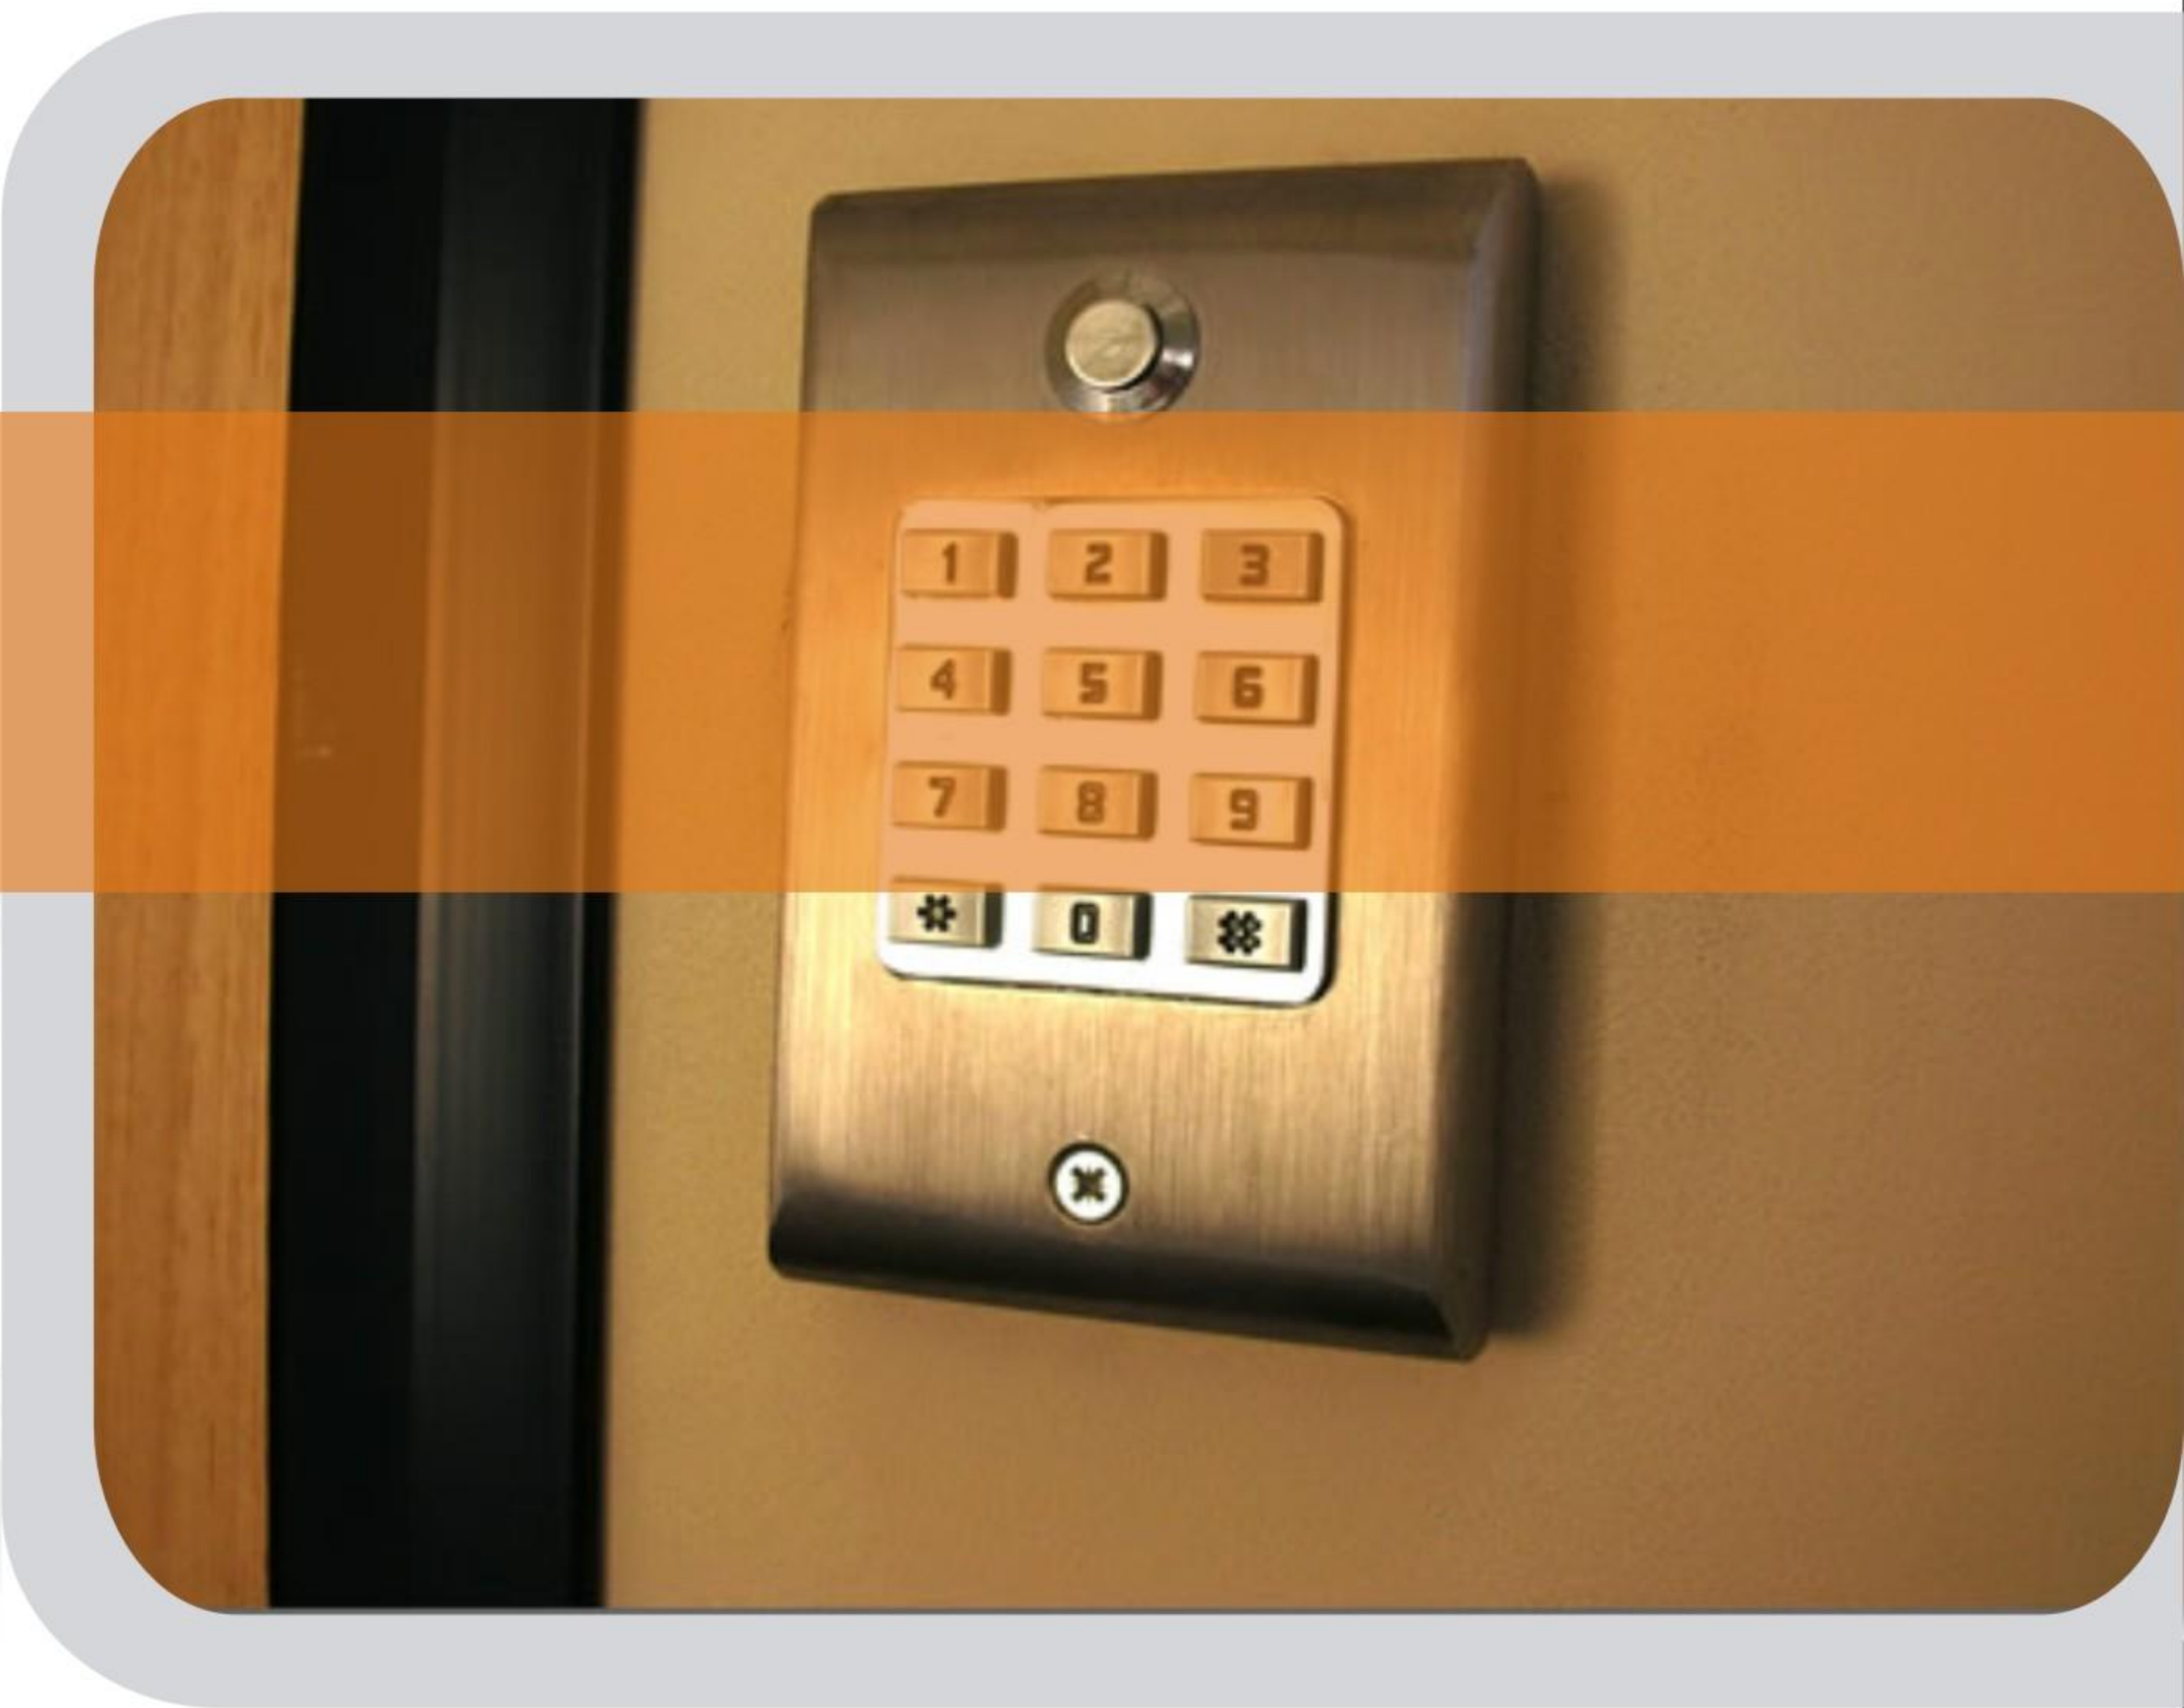

Our offered technology not only provides remote video surveillance on your mobile or your PC but also it support dial-back, which in case of emergency can send you SMS or Call on your cell phone.

Key Features

- Arm / Disarm
- Door Contacts
- Shock Detection
- Glass break
- Motion Detection
- Video Motion Detection
- Smoke detection
- Fire & heat alarm
- Emergency panic switches
- System Temper
- Power failure detection
- Data retention
- Dial back
- Mobile surveillance
- Event logs patched with event video

Access Control & RFID

Access Control

Access control provides security by giving flexible control over who is allowed to enter a building and when. The systems we provide will keep your buildings, staff and assets secure. From one door up to hundreds of doors across multiple sites, we have a solution to suit your needs.

Types of Access Control Provided

- Keypads
- Card Readers
- Biometric recognition
- Magnetic Strip Reader

Our access control solutions range from single door, stand-alone card access systems to fully-featured and integrated solutions for controlling access to multiple facilities with complex requirements. Our access control systems are complimented by a complete line of biometric, proximity, and iButton readers as well as photo ID systems and accessories.

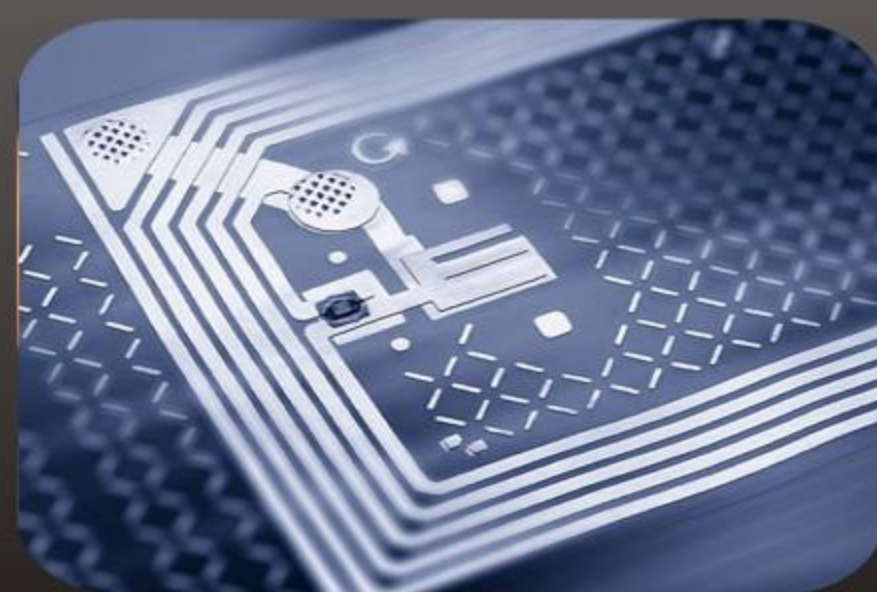

RFID

We understand the needs and concerns of companies implementing RFID solutions. Whether it's navigating the requirements of retailer or government mandates, simply helping you with the basics of RFID solutions, or specifying and ordering the right smart labels, supplies and installation.

RFID systems are being used in some hospitals to track a patient's location, and to provide real-time tracking of the location of doctors and nurses in the hospital. In addition, the system can be used to track the whereabouts of expensive and critical equipment, and even to control access to drugs, pediatrics, and other areas of the hospital that are considered "restricted access" areas.

Types of RFID Solutions Provided

Frequency Band	System Characteristics	Example Applications
Low 100-500 kHz	Short read range Inexpensive	Access control Animal identification Inventory control
Intermediate 10-15 Mhz	Medium read range	Access control Smart cards
High 850-950 MHz 2.4-5.0 Ghz	Long read range High reading speed Line of sight required Expensive	Railroad car monitoring Toll collection systems

Construction Site Management Property Management

**Your Reliable
Security
Partner**

Construction Site Management

Our remote CCTV monitoring systems avoid post-found discrepancies, prolongation or other illegal activities happened in construction projects. This prevent any irregularities in the construction sites for non-stop site monitoring and inspection.

In daytime, project managers can monitor operations of the site remotely via the Internet in his office. In nighttime, the our Video Recording Server records and stores all site circumstances into the hard disk of a computer for the project manager's retrieval later. Once abnormal circumstance is found, the project manager can look into the corresponding recorded video for detailed investigation.

Property Management

Property management employing high-tech CCTV and DVR products to strengthen its management quality is a fast-paced trend in the recent years. Our remote CCTV system is definitely an ultimate solution for the property management's needs. At large-scale, all-round property management network with leased line connection for monitoring residential properties, shopping malls and commercial properties to ensure convenient, effective and centralized management.

Either it is a hotel, office, data center, warehouse, call center, or a store. You can keep a track of all your assets by our integrated systems.

Services Provided in Building Management Services

- Simultaneous monitoring of multiple buildings at different locations
- Alarm system connection: event-driven recording and auto alarm dial-back to central monitoring station
- Keeping track of car parks or resting areas
- Control of relay switches to open and close door gates, or start and stop fountain remotely
- Control of lights or air-conditioner within the buildings
- Immediate audio alert transmission in case of any intruders

Fire Alarm Systems

Your Reliable Security Partner

Fire Alarm System

Fire alarm system is one of our major emphasis. Our selected fire alarm systems are the most reliable and efficient systems ever. And as a system integrator, it is a compulsory module for your business and home security system.

These systems consist of a central control panel to which smoke alarms and heat detectors are connected, along with bells or horns that are activated when the system triggers an alarm. Other sensors associated with the burglary functions connect to doors and windows or monitor rooms for motion or body heat. The control panel operates from house power but also usually contains an emergency battery which can operate the system for about 24 hours during a power outage.

Wireless Fire Alarm System

Our professional wireless fire alarm systems tackle fire safety with ease by providing an ultra-modern building fire protection solution. Simply because, virtually all wiring is eliminated and is therefore most suitable for both new and older buildings. Installation is rapid while disruption is kept to a minimum with costs remaining extremely favourable compared to conventional wired-systems.

Key Features

- Multiple addressable loops
- Multiple addressable zones
- Comprehensive event log
- Conventional sounder circuit
- Printer connection privilege for printing event logs
- Programmable & pre programmed systems available
- Reliable wireless connectivity

Tollway Barriers Vehicle & Pedestrian Access

Your Reliable
Security
Partner

Tollway Barriers

We offer the optimal solution for any toll way station. Our gates can be varied according to the customers requirements in regard to different open /closing speed, kind of controller, boom profile and other attributes. The long lasting high quality have been selected for high operating frequencies and offer maximum reliability in operation, what type of tollway you opt for.

Tollway Barrier Usability

- For the smooth operation at motorways
- For authorised access to premises
- For toll parking lots
- For the efficient service of multistory car parks
- For the controlled access to stadiums, fairs or the means of public transport

Tripod Turnstile Barriers

Tripod Turnstile barriers are available to control pedestrians entering or exiting restricted areas, usually under surveillance, in low security situations. This design provides a cost effective, anti-tailgating solution with a bar rotation of 3 x 120 degrees.

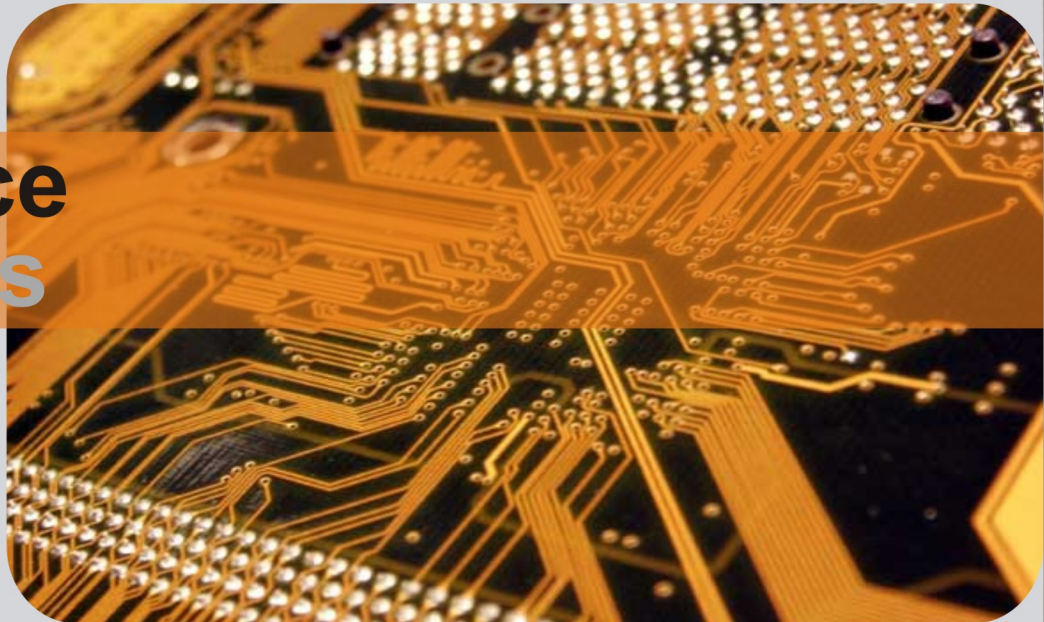

Swing Gate Barriers

The swing gates are available to provide a user friendly access barrier for one-way and two-way, pedestrian traffic control. Operation in either a 1 x 90° or 2 x 90° bi-directional mode is obtained by pre-selecting the respective MUC Controller function.

Maintenance Services

Your Reliable
Security
Partner

Maintenance Services

Backed by technically powered and experienced staff, we are qualified to provide all types of installation & maintenance services for CCTV Systems, Intrusion System, Access Control & RFID System & Fire Alarm System.

Our highly educated and experienced staff has aim to provide you with best ever service according to customer need. All of our technical staff is regularly trained for new technologies and updates on all the concerned system. They have capabilities to handle even any type of emergency jobs.

Whatever the problem and situation is, our prime concern is to provide customer with the best solution using our experience & technical skills

Maintenance Type

- Emergency Maintenance
- Preventive Maintenance
 - Monthly
 - Quarterly
 - Annual

Installation Services

For any new job received, our survey engineer start the survey for reliable, cost effective & secure solution. The case is then transferred to the installation team for layout of installation. Even it's a small project or a huge project, there is never compromise on quality and security
